DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a method of predicting a drug necessary to achieve a desired drug effect using patient clinical characteristics involving inputting a data set and training the computer neural network on the first data set, classified in class 702, subclass 20.
- II. Claim 20-46, drawn to a method of predicting a drug necessary to achieve a desired drug effect using patient clinical characteristics involving using the first neural network to generate a second data set and training the second data set, classified in class 702, subclass 20.

Inventions I and II are directed to related subject matter of predicting a drug necessary to achieve a desired drug effect. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, group I is drawn to a method of predicting a drug necessary to achieve a desired drug effect using patient clinical characteristics involving inputting a data set and training the computer neural network on the first data set. Group II is drawn to a method of predicting a drug necessary to achieve a desired drug effect using patient clinical characteristics involving using the first neural network to generate a second data set and training the second

data set. The different inventions involve different method steps with different modes of operation, function, and effect.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1631

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
